

A SIMPLE TURTLE

A turtle is a small animal that moves on screen or on paper.

As it moves, it leaves a little trail on the screen/paper so you can see where it has moved.

This turtle accepts commands in the form of a small 140 character program.

The turtle has a small memory, so the whole program must fit inside 140 characters.

name:	title:
-------	--------

The turtle has a small memory, so the whole program must fit inside 140 characters.

title:

e.g: a small square is: FRFRFRFR

A diagram of a circle representing Earth. A vertical line passes through the center, with 'N' at the top and 'S' at the bottom. A horizontal line also passes through the center, with 'W' on the left and 'E' on the right. A curved arrow around the vertical axis indicates rotation. An arc between the vertical axis and the horizontal line is labeled '90'.

suggestions on how our turtle could be changed to draw more complex shapes:
